The CABY Proposition 84, 2015 IRWM Round 3 Grant Solicitation Proposal is comprised of two projects, neither of which directly involves groundwater management or recharge.

Justification: The two projects included in this Proposal do not involve groundwater management or recharge as they are projects that enhance infrastructure related to clean and reliable drinking water as follows:

Project 1: Meade Canal DAC Project will encase 3,000 linear feet of earthen canal in a ductile iron pipeline to reduce water losses and increase water quality to Smartsville Water Treatment Plant, a small DAC in the CABY region.

Project 2: Drought Response Disinfection By-Product Reduction Project involves installing tank mixers and ventilation systems at seven water storage tanks to reduce disinfection byproduct levels and reduce system water loss in domestic water supply to DACs in the CABY region.
